

Stable Isotopes Urenco Nederland B.V.

Urenco's goal is to produce low activation materials by removing specific undesired isotopes from materials so they can be used in ITER.

Stable Isotopes is part of Urenco Enrichment Company, an independent global energy and technology group, using Urenco's own centrifuge technology.

Urenco's centrifuge can be used to separate isotopes of many elements. Urenco Stable Isotopes has some fifteen years of experience with separating stable isotopes. Urenco is the only Western European producer of these isotopes.
