ImProvia Group

ImProvia Technologies is part of the ImProvia Group with a national emphasis on maintenance issues varying from engineering to strategy implementation,

Interim and Project Management tasks in the technical and organisational areas and Technology issues ranging from technical consultancy to turnkey projects.

ImProvia Technologies

ImProvia Technologies translates customer needs and preferences into (machine) specific requirements and innovative solutions in a technical environment.

We have a great deal of experience in the mechanisation and automation of new and existing (production) processes and the installation of complete production lines. Other specialist areas in which we operate include: infrastructure, energy and industrial process technology.

ImProvia Technologies aims to focus on 3 main areas:

- *Secondment*
- *Mechanisation & Automation*
- *Acceptance of Turnkey projects*

Secondment

Secondment at ImProvia means that the ImProvia consultant, under the control of the Client/(or: under the Client's management), contributes to the result and also gives advice on improvement proposals within his sphere of influence. A fresh new look within a team brings with it new ideas. To optimise this, each ImProvia consultant is supervised and coached by a senior officer.

Mechanisation & Automation

We provide our clients with total solutions to their problems. This results in actual responsibility for the proposed innovative solutions.

Turnkey projects

The ImProvia Group has a great deal of experience with Project Management, Maintenance, Engineering, Business Cases, Procurement and Commissioning, etc. This means that we can supply complete and complex projects on a turnkey basis. With our (inter)national network we have a considerable knowledge cluster available.

Of course, we supply the complete CE construction file with corresponding CE certification.

Philosophy

If we look at the market and its trends, we can see that companies need to outsource (risky) solutions / projects completely to external engineering design firms.

As an engineering design firm, we cater to this need by effecting/(or: promoting/championing)) a transfer/(or: transition) from capacity supply to participation in responsibilities and risks for the engineering and realisation of projects.

ImProvia Technologies aims at greater participation in responsibilities and risks.

Competencies

ImProvia Technologies has the following competencies available:

- M-engineering
- SW-engineering
- Modelling / simulating (UG)
- S7 controls
- E-engineering
- System architecture
- Vision applications
- Green / Black Belts
